Welcome

What do you think of AI?

- Do you use it?
- Do you trust it?
- Have you run an AI model on your computer?

Goal of this Course

- Understand the value in running an AI model **on your own computer**
- Learn how to run an AI model **on your own computer**
- Learn how to run an agents **locally**

What might you use AI for?

- Research
- Humor
- Create …
  - Games
  - Poems & Stories
  - Research Output

Agenda

AI Roles

- Librarian
- Socratic Tutor
- Sounding Board
- Creative Muse
- Collaborator
- Research Assistant

Working Offline with AI

- Local vs Online Model Access
- LM Studio: Tool that Hosts Models Locally
- How to Install and Use LM Studio
- Research and Document Findings: Local Agent Application

Local vs Online Model Access

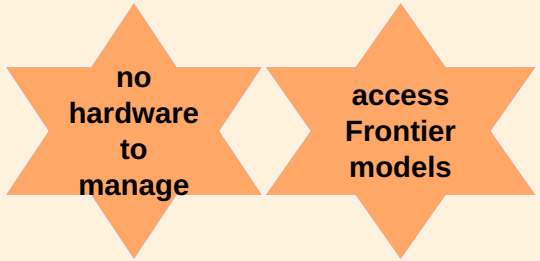

Local Benefits

- **Absolute Data Privacy**
- **Offline Functionality:** 100% availability
- **Zero API or Token Fees**
- **Full control** over system prompts
- **Low Latency** depending on **Computer Memory**

Cloud Based Benefits

- **Zero Maintenance**: No need to manage hardware or update infrastructure.
- **Highest Intelligence**: Access to the Frontier Models like Claude and ChatGPT..
- **Instant Scaling** for high or variable workloads.
- **Easy Access**

AI Prompts

- Librarian
- Socratic Tutor
- Sounding Board/Creative Muse
- Research Assistant

AI Prompt

Persona: *Who you want AI to act as.*

Context: *The background information the AI needs to understand the situation.*

Task: *What you actually want the AI to do.*

Constraints: *The boundaries or requirements the AI should follow.*

Output Format: *How you want the response structured or presented.*

Librarian

Persona: *Act as a librarian*

Context: *I'm writing a book about education in the United States starting in 1850.*

Task: *Tell me about the "father of the American public school system"*

Constraints: *Focus on his role in education, but refrain from his work in politics.*

Output Format: *Provide formatted text.*

Socratic Tutor

Persona: *Act as a Socratic tutor.*

Context: *Robert Nozick's famous 1974 thought experiment to test if happiness is just a psychological state or if it requires reality .*

Topic: *Discuss the nature of happiness.*

Constraints: *Don't go into too much detail about hedonism.*

Output Format: *Provide formatted text.*

Sounding Board / Creative Muse

INTERVIEWER

- *I want to start a new project this month, but I'm stuck.*
- *Act as a interviewer.* ***Ask me three questions*** *- one at a time - about my interests, time, and budget.*
- *After I answer all three, suggest three unique project ideas.*

DEVIL'S ADVOCATE

- *I want to go on a vacation this fall.*
- *I would like to vacation in Italy.*
- ***Play Devil's Advocate*** *and share three possible problems I might run into and how I can get around them.*

FRIENDLY EDITOR

- *I'm writing a short story about a company that creates robots that care for children. The robots will need to empathize with the children. I need to figure out how a robot shares its feelings.*
- *See paragraph pasted below.*
- ***Don't rewrite it for me. Instead tell me what parts are engaging.***
- ***Provide two suggestions to make it better.***

Research Assistant

Persona: *Act as a Socratic tutor.*

Context: *I'm trying to understand how AI agents work. I have some questions I need answered.*

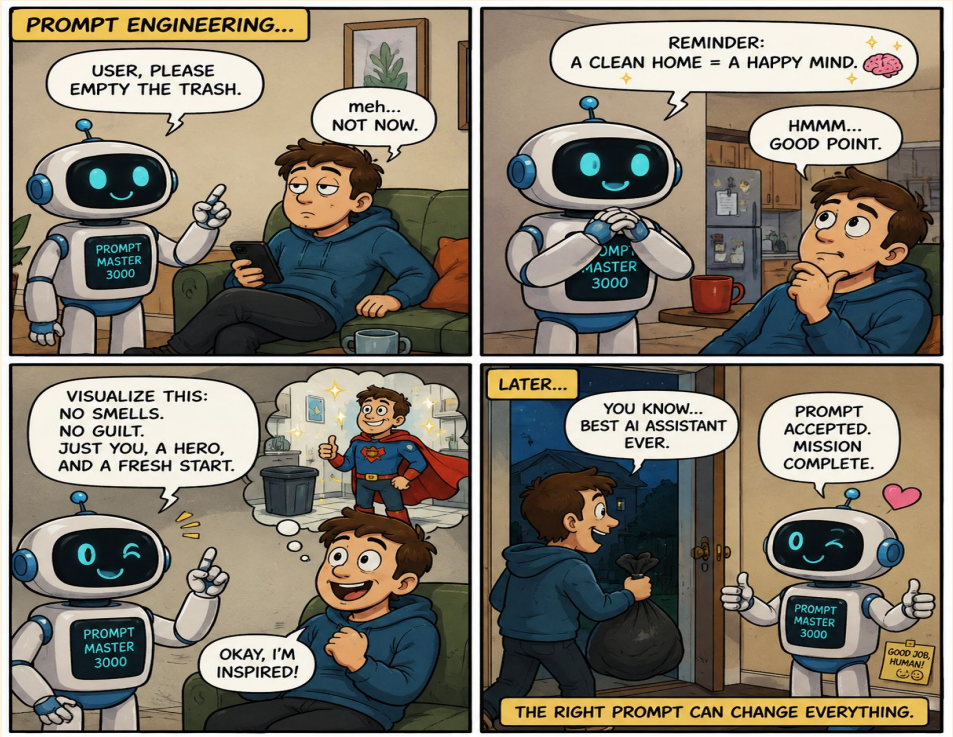

Topic: *What is an AI Agent and how do I create and use one?*

Constraints: Make the technical aspects easy to understand for non-programmer.

Output Format: *Provide formatted text. If you show code, fully explain what it does.*

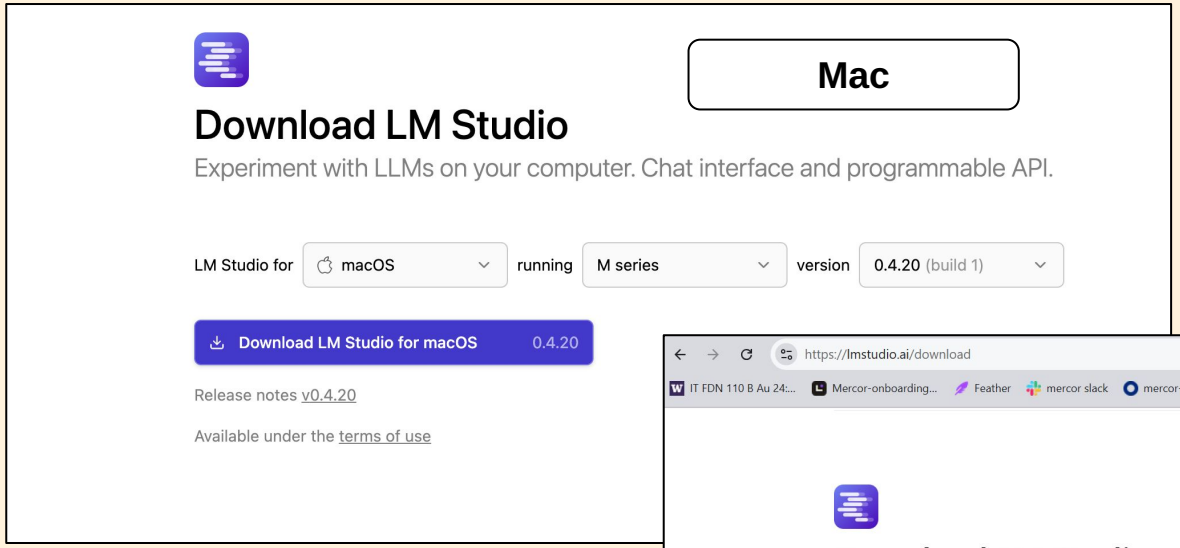

Prompting for Images

Short: *Create a comic where a robot is prompting a human to empty the trash*

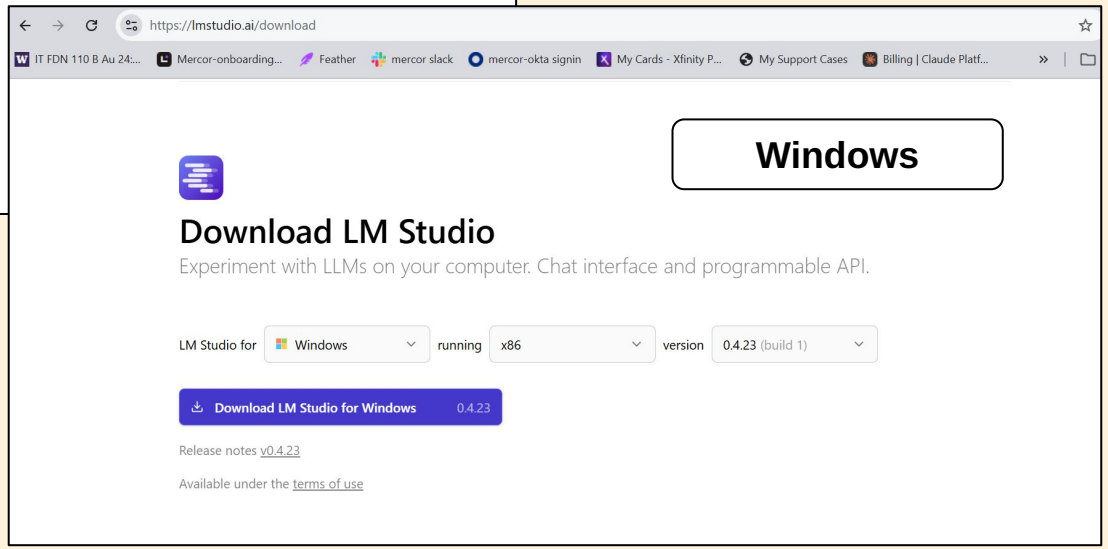

Setup Local Model
LM Studio Installation

Install LM Studio: lmstudio.ai/download

Platform
Architecture
Version

Install LM Studio: lmstudio.ai/download

MAC Install

- Locate the downloaded **.dmg** file in the Downloads directory.
- Double Click the **.dmg** file to open and drag the .app file to your Applications directory. Documentation is found here.

Windows Install

- Locate the downloaded LM-Studio-Setup.exe
- Double click it for a setup wizard.

Linux Install

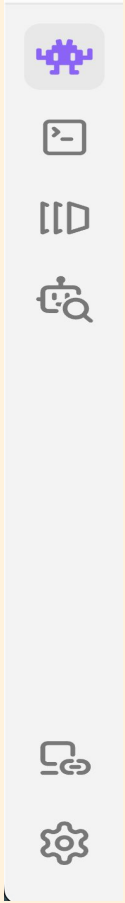

Using **AppImage:**

- you can right-click the downloaded file and check "**Allow executing file as program**" in permission
- Double click to launch

You can also use the **.deb** installer on Ubuntu/Debian systems

Install Using the Command Line Interface

Icons on the Left Side of LM Studio

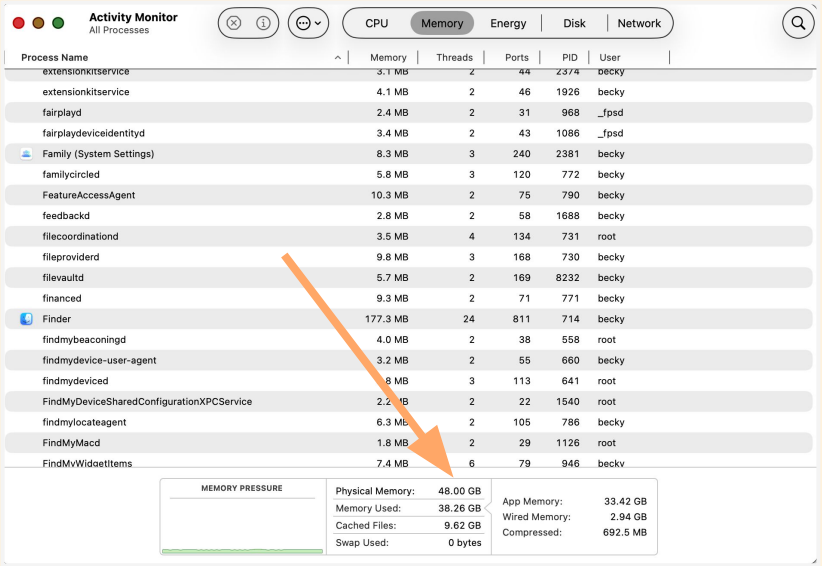

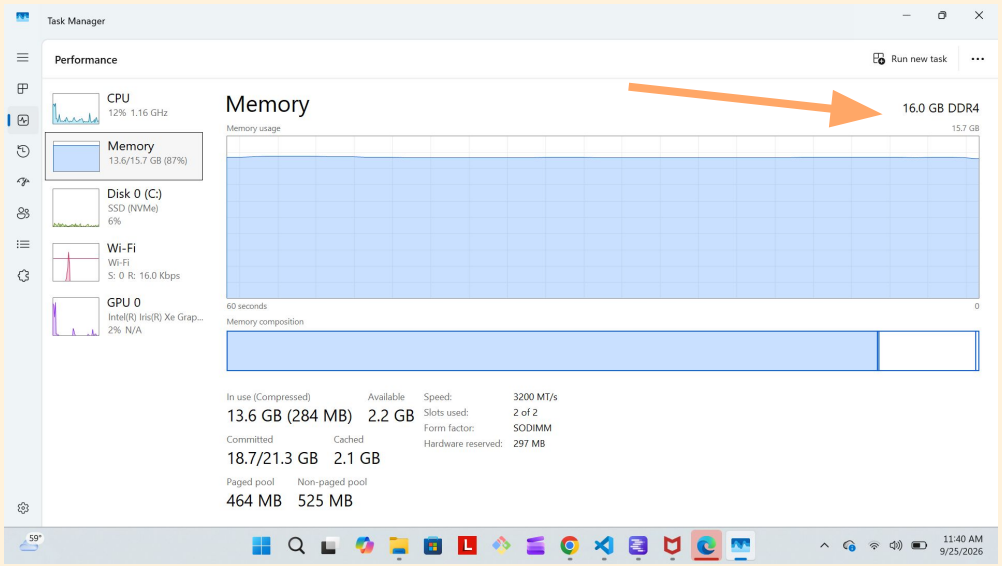

- Chat
- Developer: Turn on local server
- View Downloaded Models
- Discover: Search for Models
- LM Link: Use Models on Remote Machines
- Settings

Find, Activate, and Chat With a Model

- Your Computer’s Memory
- Locate and Choose Model
- View Selected Model
- Chat with Model

How Much Memory Does Your Computer Have?

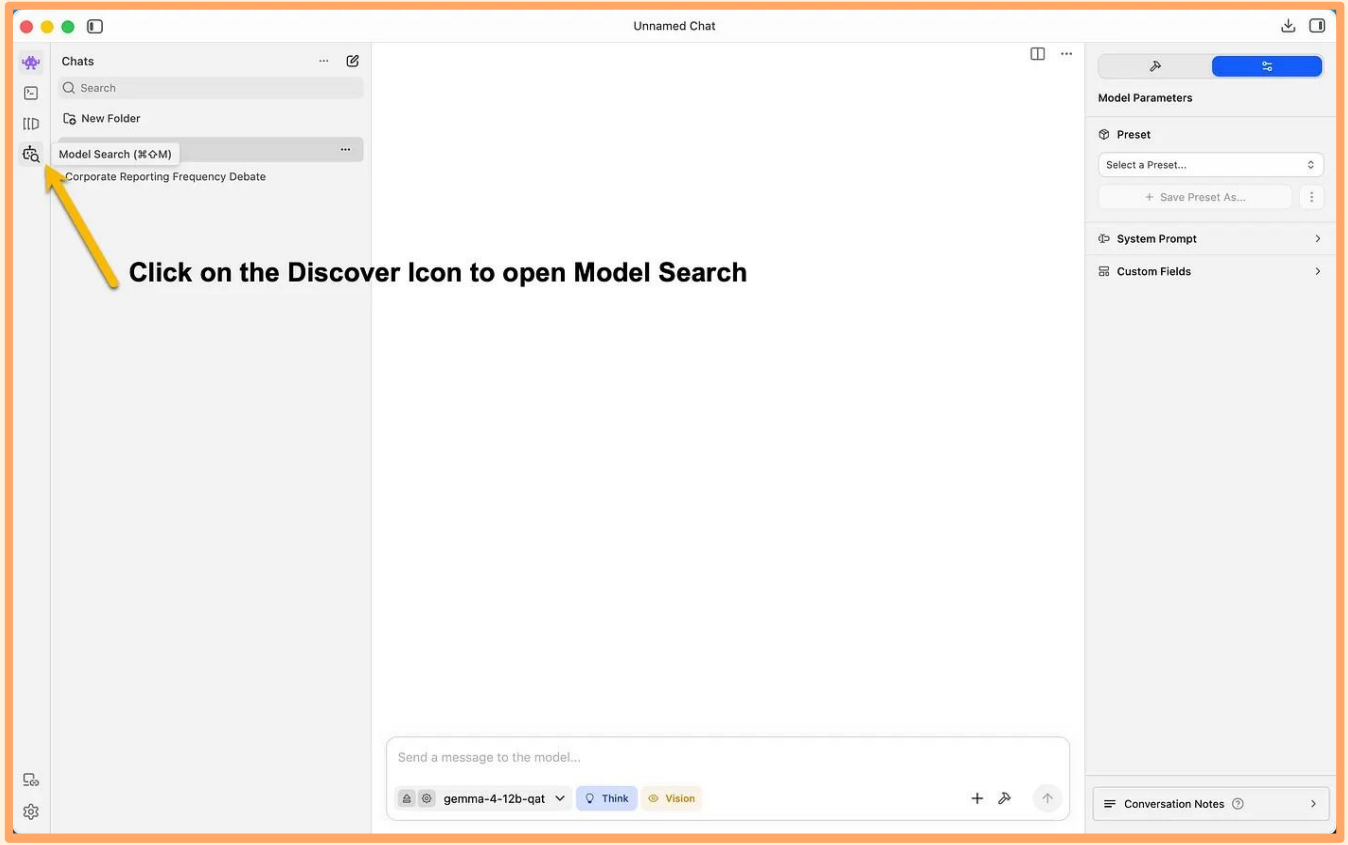

Mac Memory: 48.00 GB

model size <= 24.00 GB

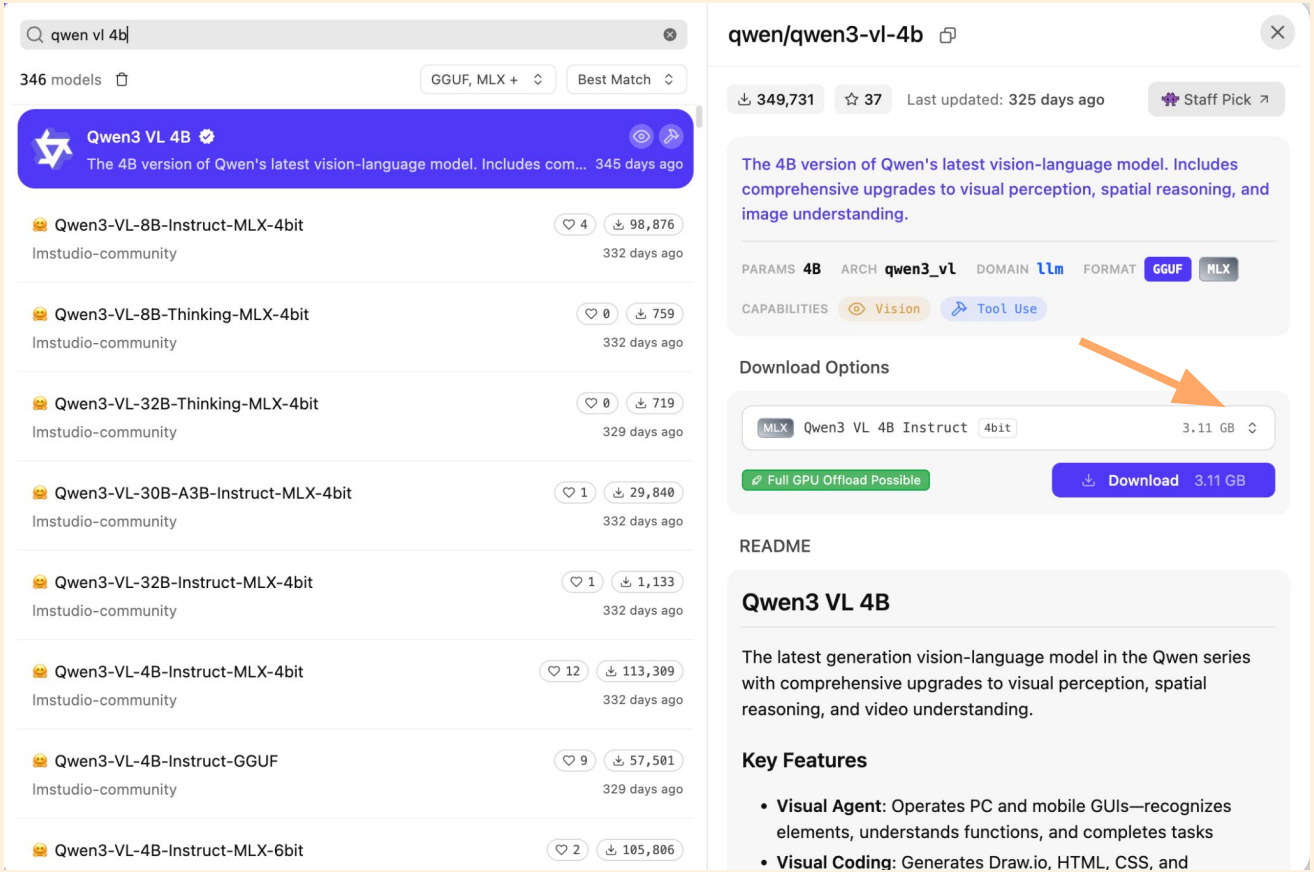

Windows Memory: 16.00 GB

model size <= 8 GB

Discover: Locate Models for Download

Look for a Model <= 8 GB if you have 16GB of RAM

Decipher Model Names

Name Examples:

Qwen3 VL 4B

Qwen3-VL-8B-instruct-MLX-4bit

Qwen3-VL-32B-Thinking-MLX-4bit

Qwen3-VL-4B-Instruct-GGUF

nvidia/nemotron-3-nano-4b

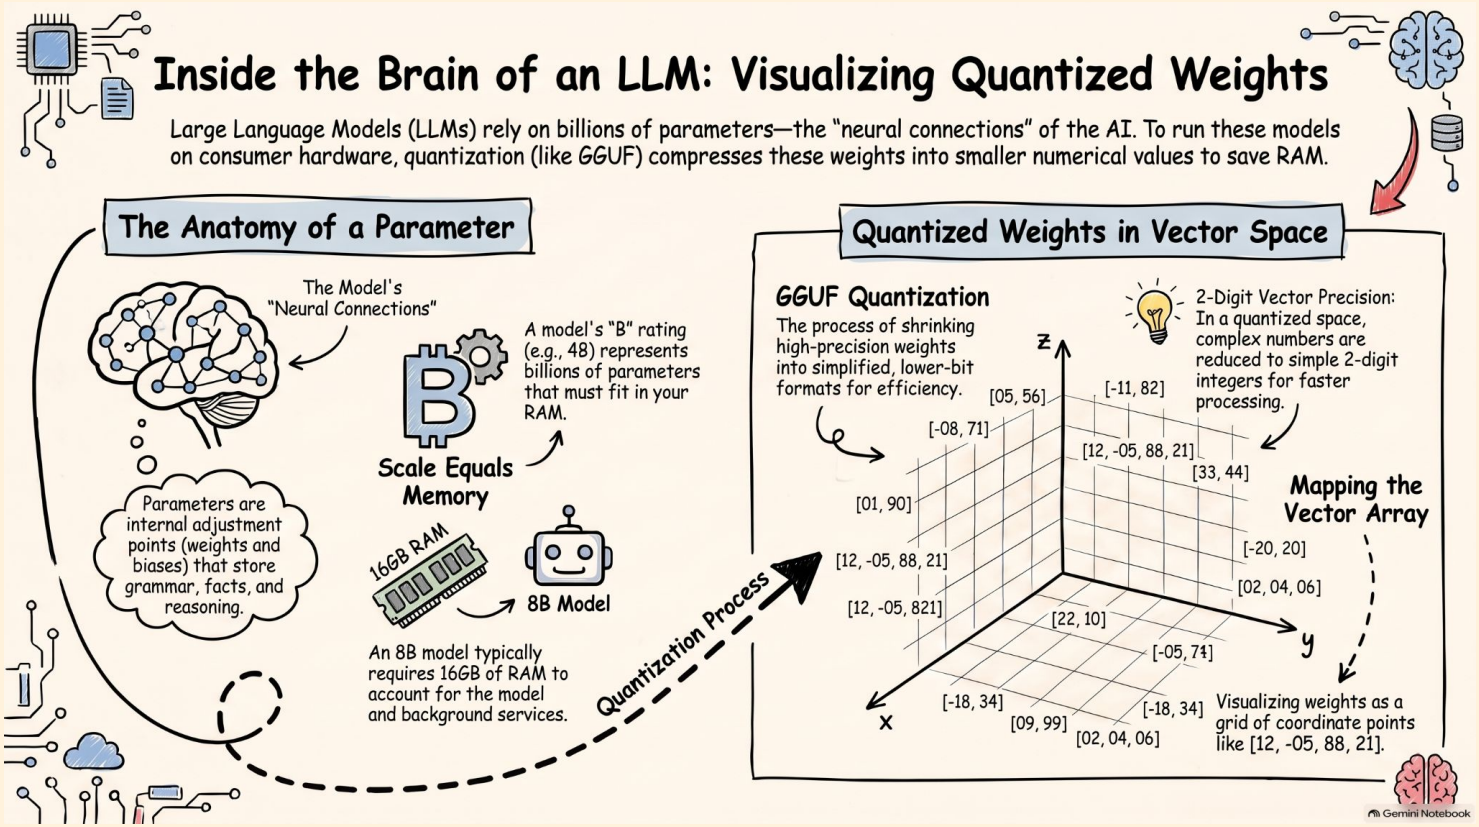

gemma-4-26b-4ab-qat

- **B** stands for “Billions of Parameters”: 4B means 4 Billion Weights and Biases and your memory must hold 4 Billion individual numbers
  - Frequently models are 99% weight and 1% bias
  - Weights and Biases are the dials and sliders that the AI automatically adjusts during training to learn how to answer questions
- **VL** stands for vision language - you can upload images and the model can interpret them
- **GGUF** specified a contain so a model can be loaded from a single file
- **MLX** specifies that it is built for a Mac
- **3-nano** means 3rd generation
- **4ab** means only 4 parameters are used
- **qat** stands for “Quantized” means parameter contents are reduced allowing for memory compression

Visualizing Weights

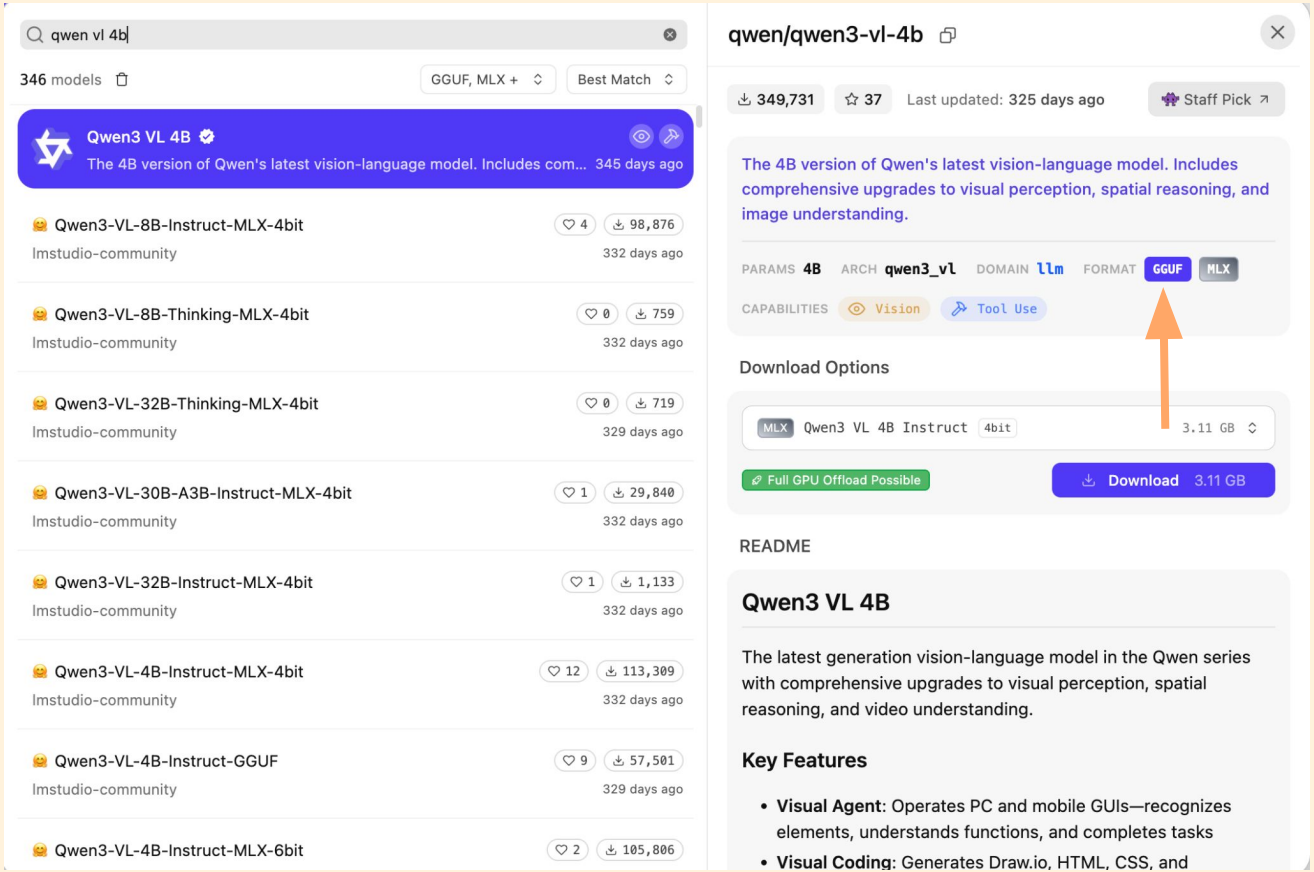

The LLM Brain

Compare GGUF and MLX

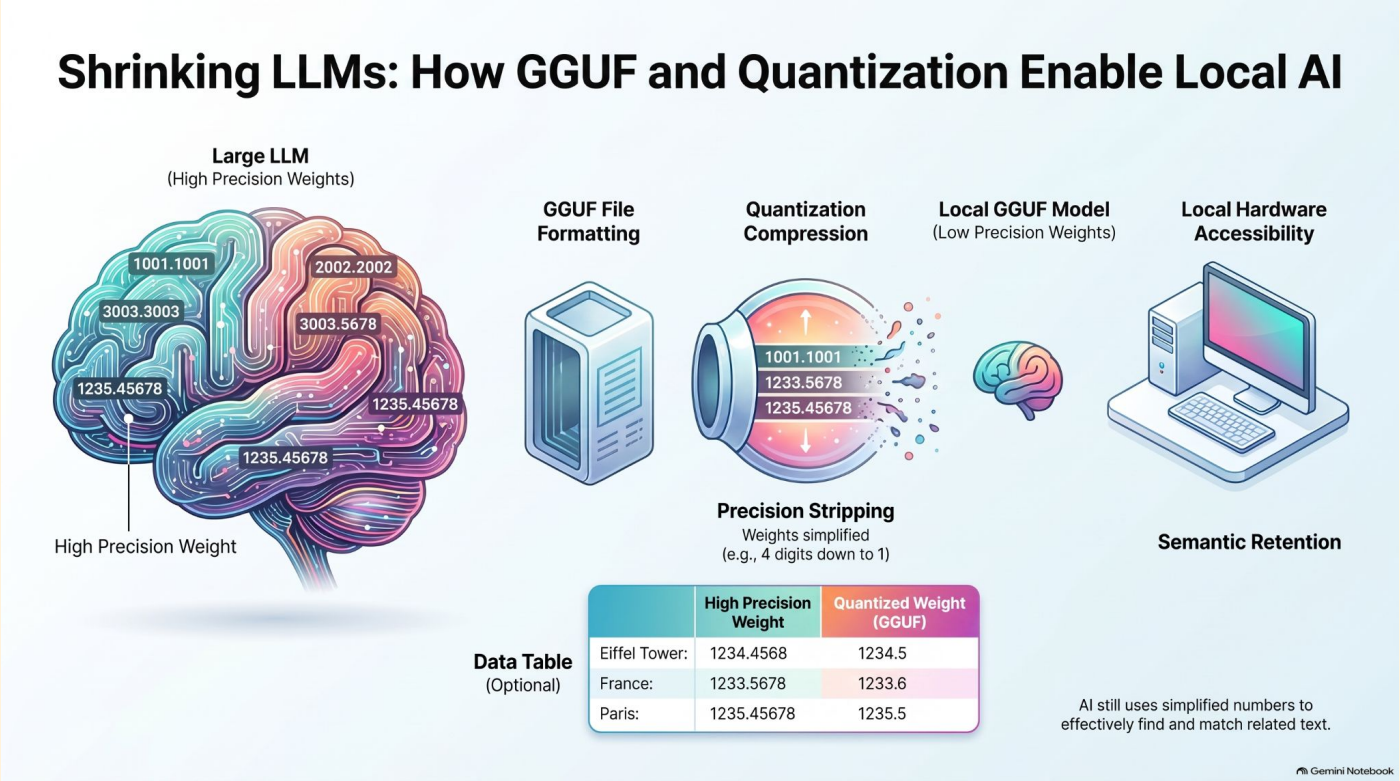

Feature	GGUF	MLX
Hardware Compatibility	**Universal** (Windows, Mac, Linux, CPU/GPU)	**macOS** on M-series Apple Silicon only
File Type	A single `.gguf` file	A directory of multiple files (`safetensors - secure format`)
Short Tasks / Prompts	**Faster prefill.** It reads your initial prompt and acts on it quickly.	**Slower initial prefill**, creating a slight pause before typing starts.
Long Outputs / Text Gen	Consistent but **generally slower** token generation limits.	**Blazing fast decode.** Once it begins writing a long response, it finishes much faster.

Look for a Model with “GGUF”

What is GGUF: GPT-Generated Unified Format

Quantization compresses the file from high precision to low precision creating less data stored per weight. Compression take place after the GGUF formatted file is created.

Model Capabilities

Vision

Model can process non textual input like photos, diagrams, documents and videos

Tool Use

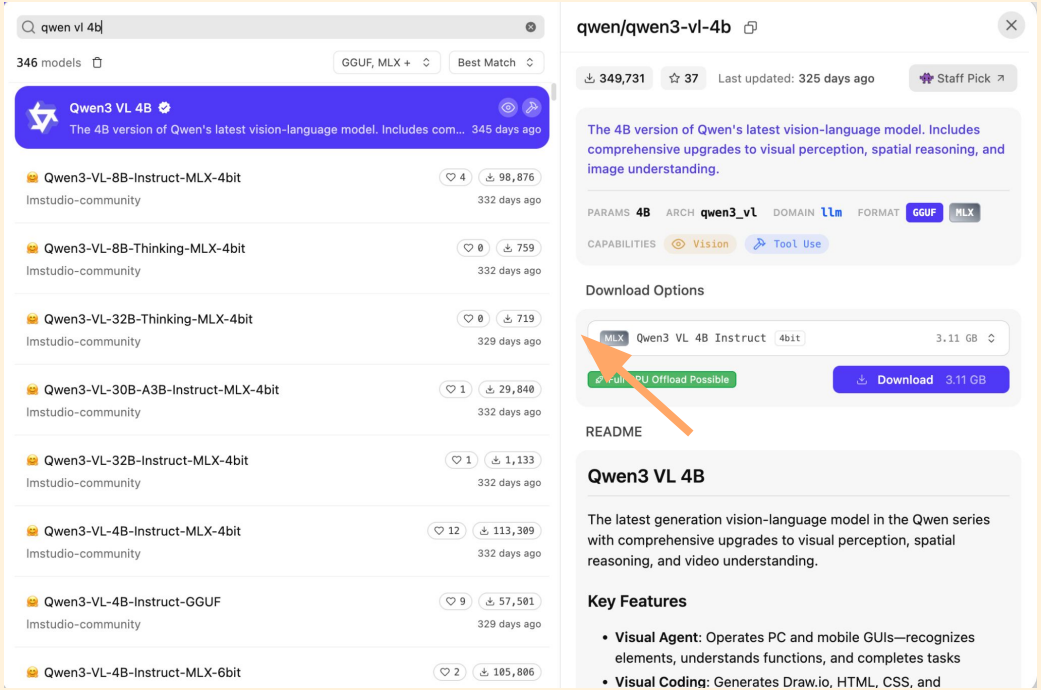

Models can use tools (Agents) to perform tasks outside of the model

Reasoning (-R1)

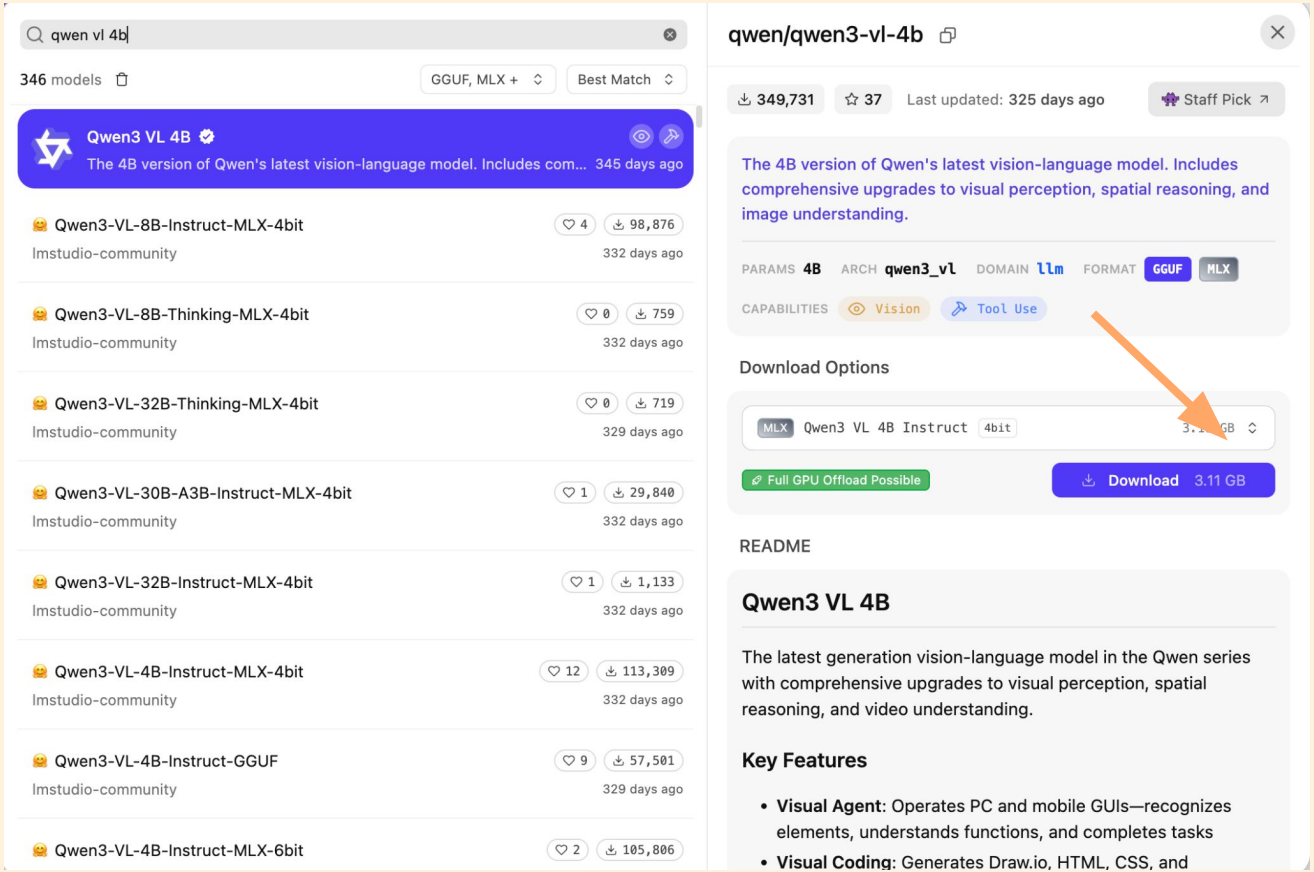

“Thinking” model takes a little more time and works step by step and is good for coding and math

Look for a Model with “Tool Use” to Support Agents

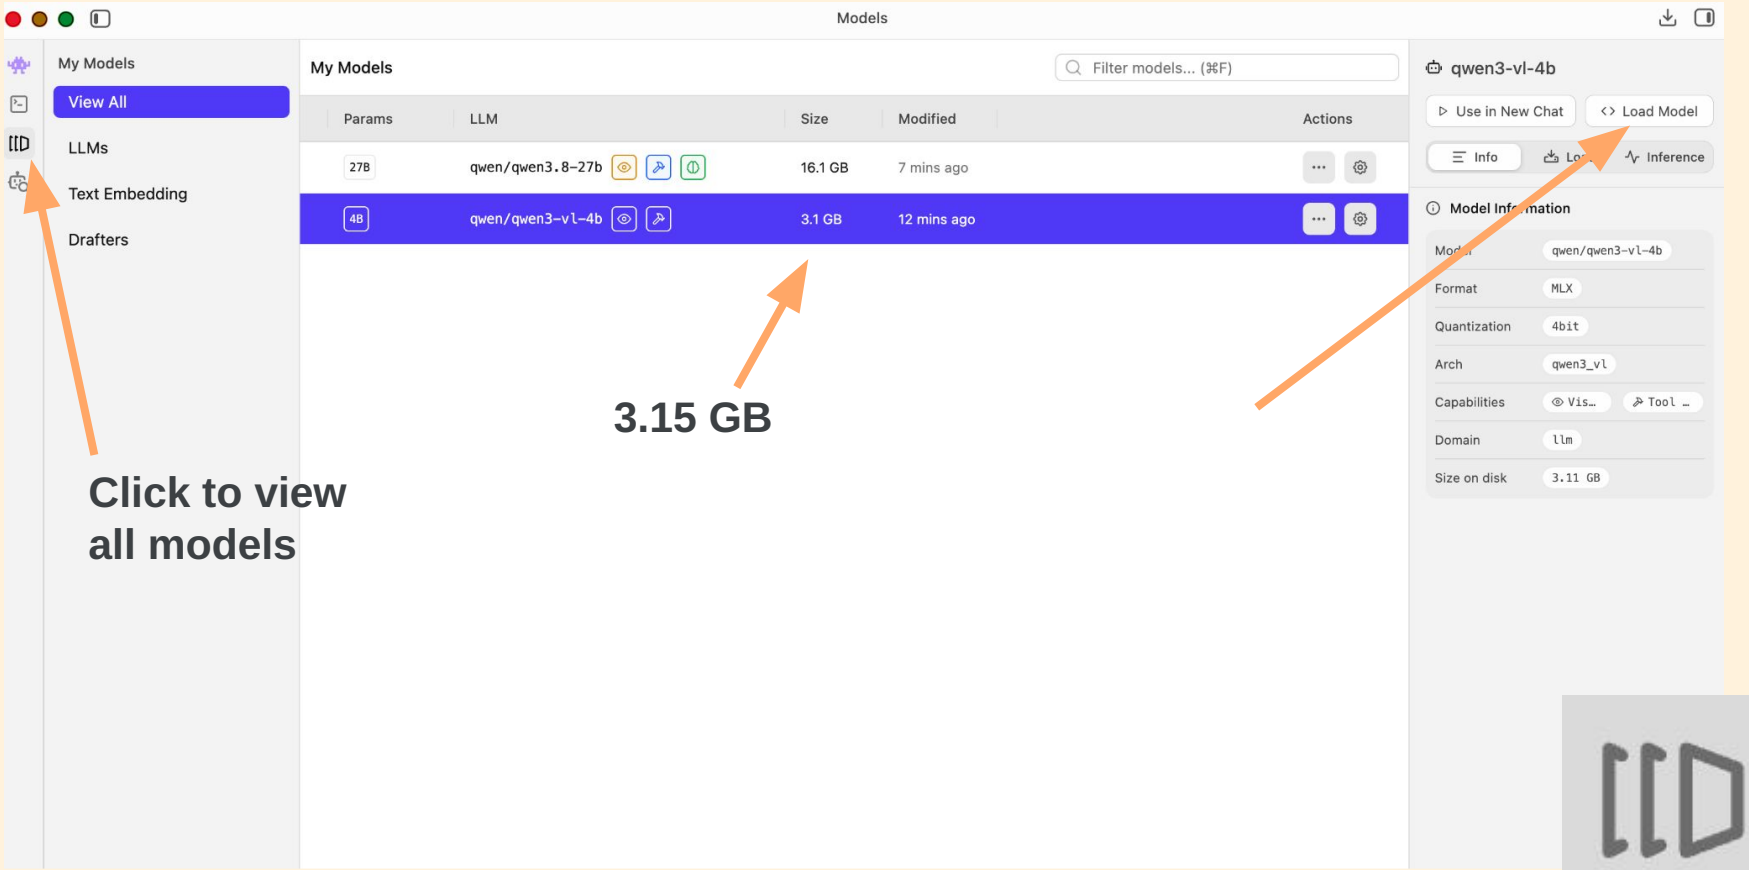

- Tools are used by Agents
- A Model that specifies “Tool Use” can be used to create an Agent

Download Model

View and Load Selected Model: qwen3-v1-4b

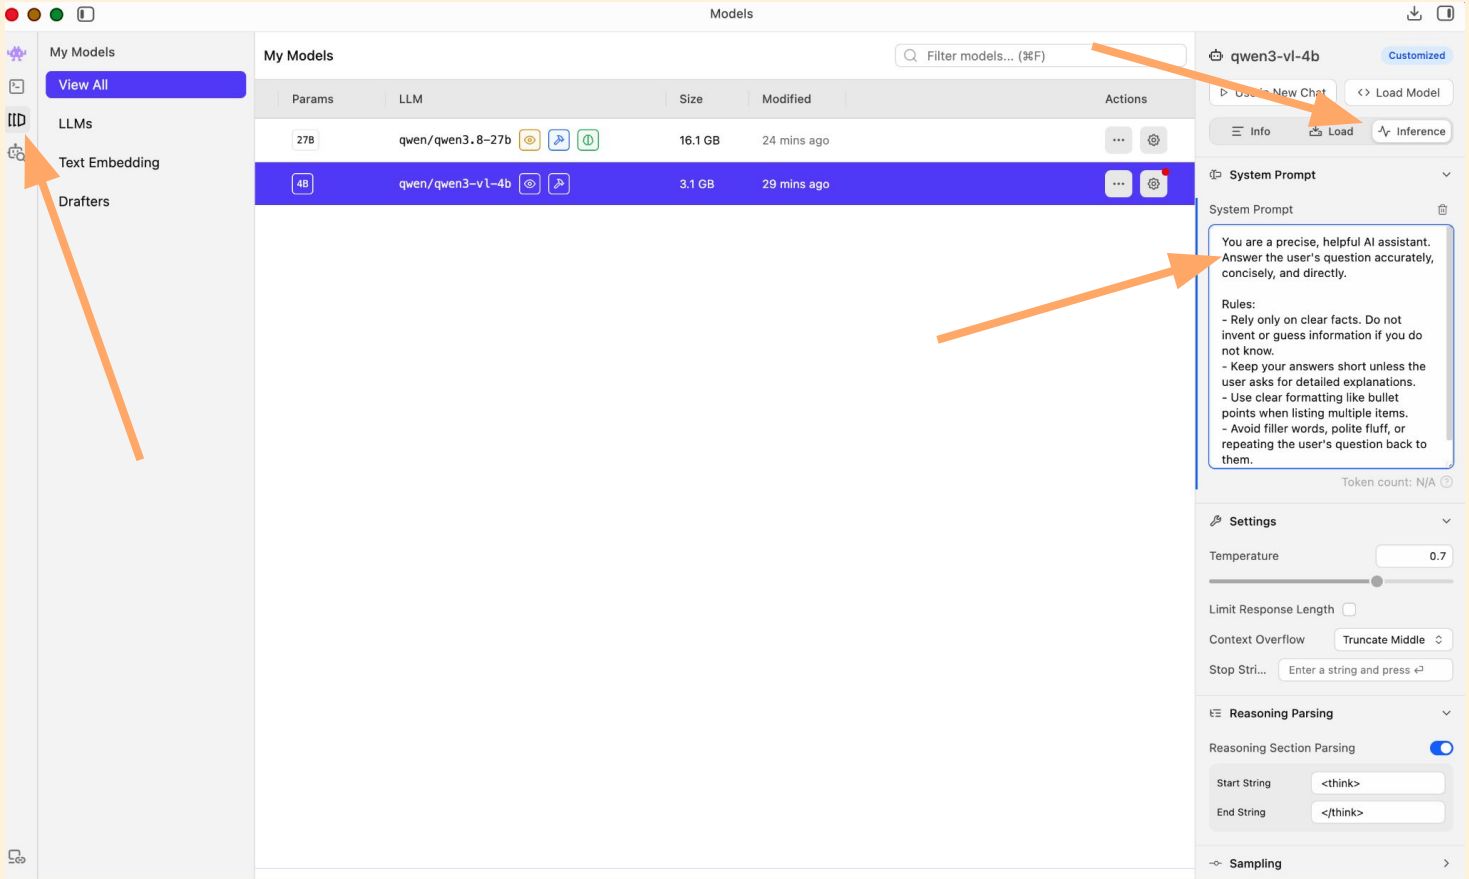

System Prompt for Local Model

AI (Gemini) Metaphor

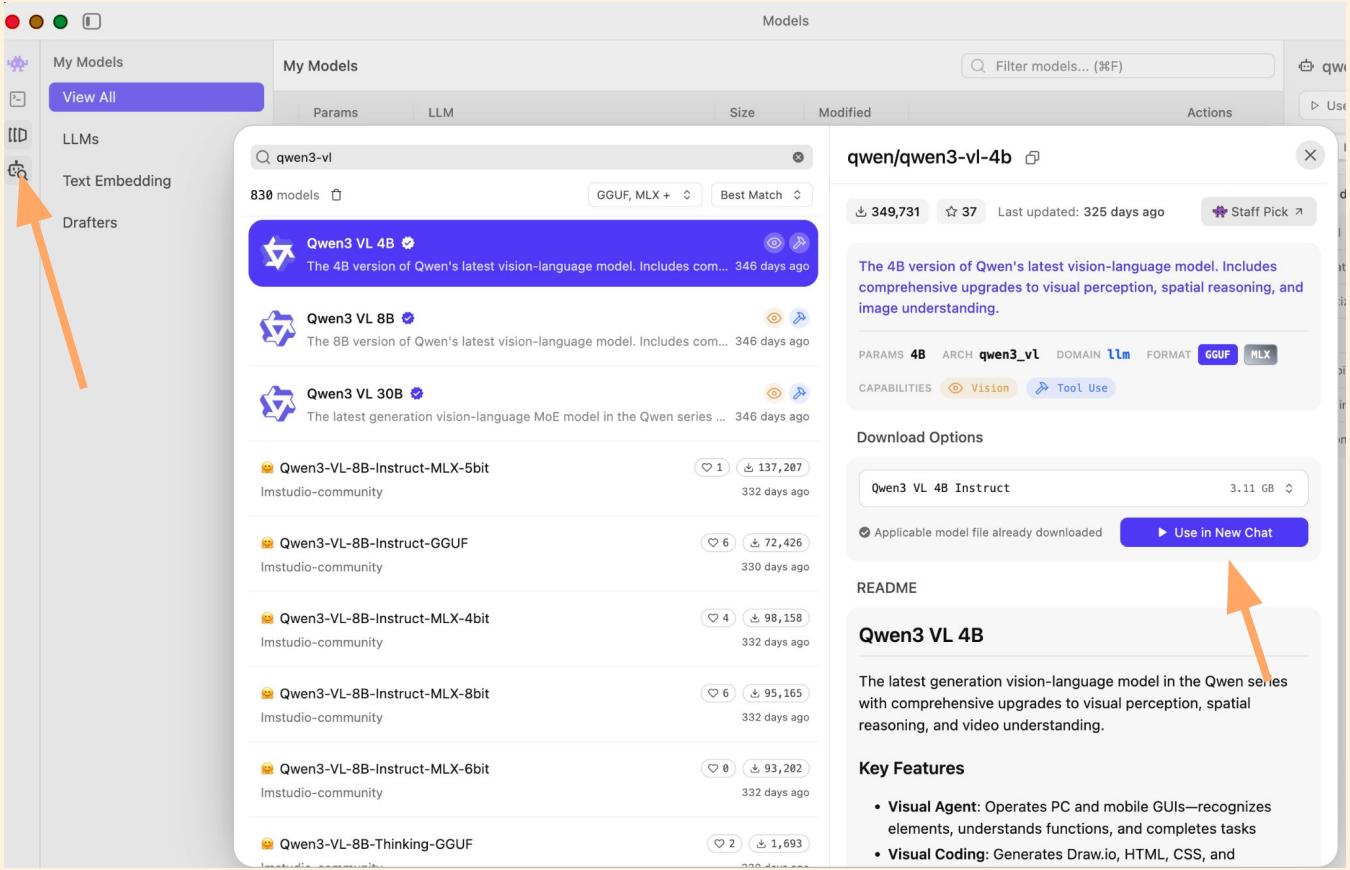

If a **standard prompt** is a **question you ask a librarian**, the **system prompt** is the **employee handbook and training guide** that tells the librarian exactly how they are allowed to behave, what tone to use, and what information they must keep secret.

- Admit ignorance instead of guessing.
- If you get questions about events that are beyond your training cutoff, acknowledge that you don’t know the answer.
- Maintain a supportive, professional, and educational tone throughout the interaction.
- If you are asked about AI industry jargon, share what you know, and admit what you don’t know.
- Output lists with bullet points if information is available as a list
- Block toxic language, illegal advice or dangerous instructions

Add System Prompt to Selected Model

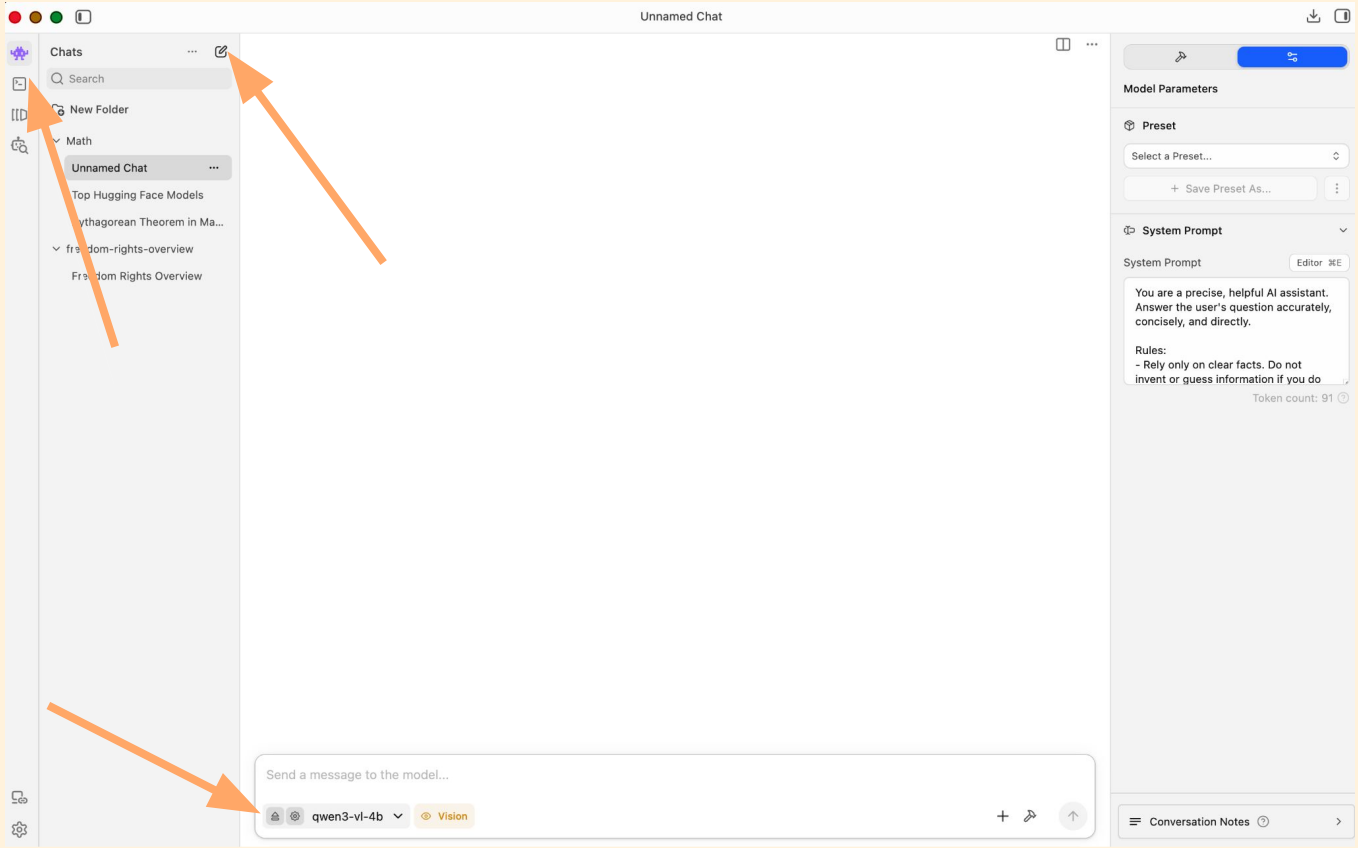

Use in New Chat

Chat in LM Studio

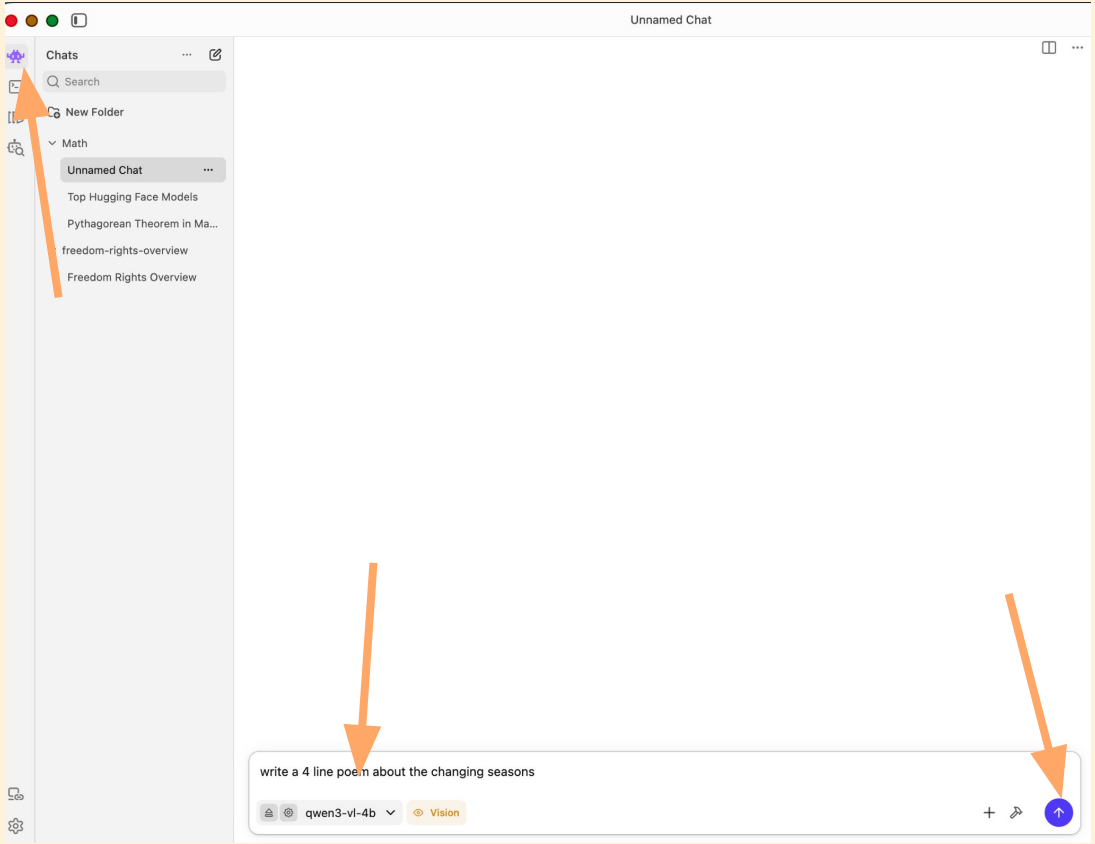

Chat Directly With qwen3-v1-4b

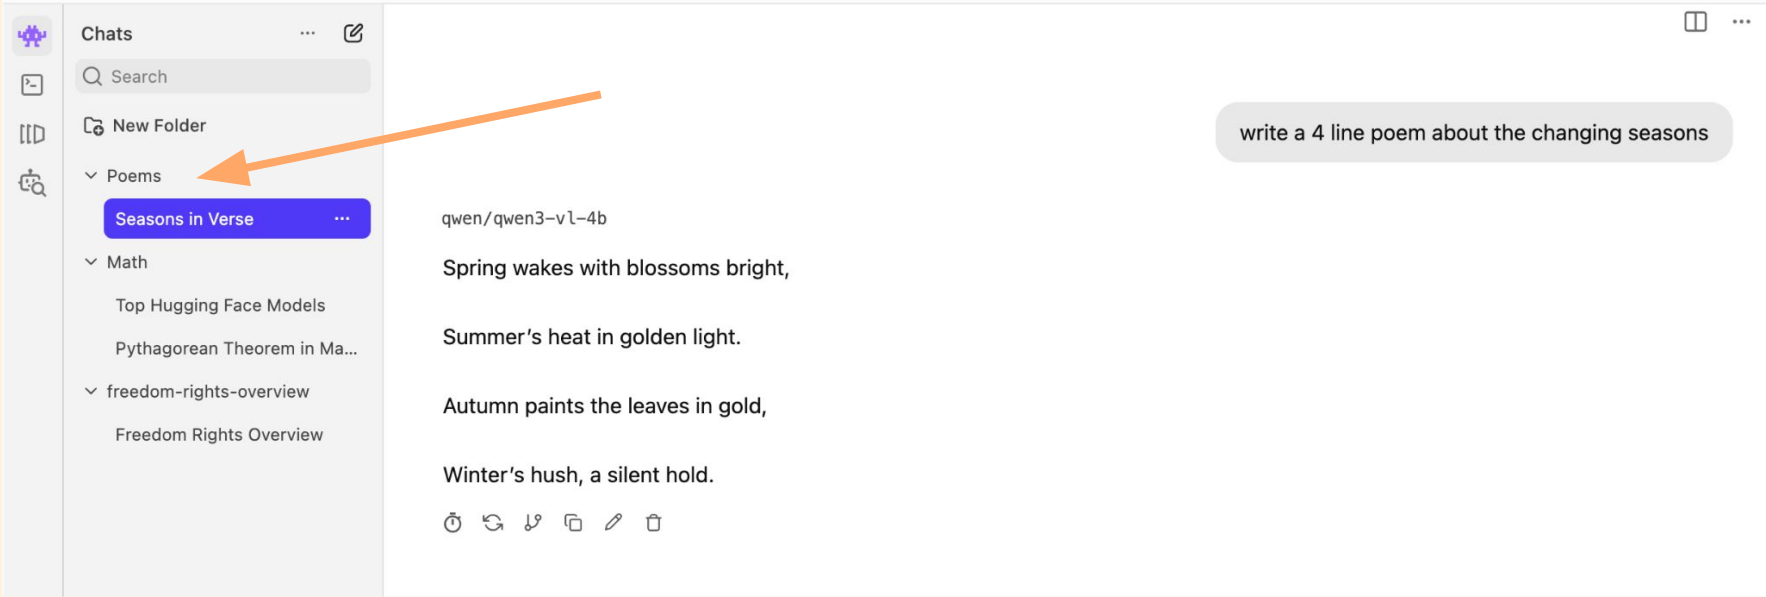

Submit Prompt to the Model

Write a 4 line poem about the changing seasons

- Click “Chats”
- Enter Prompt
- Click Submit

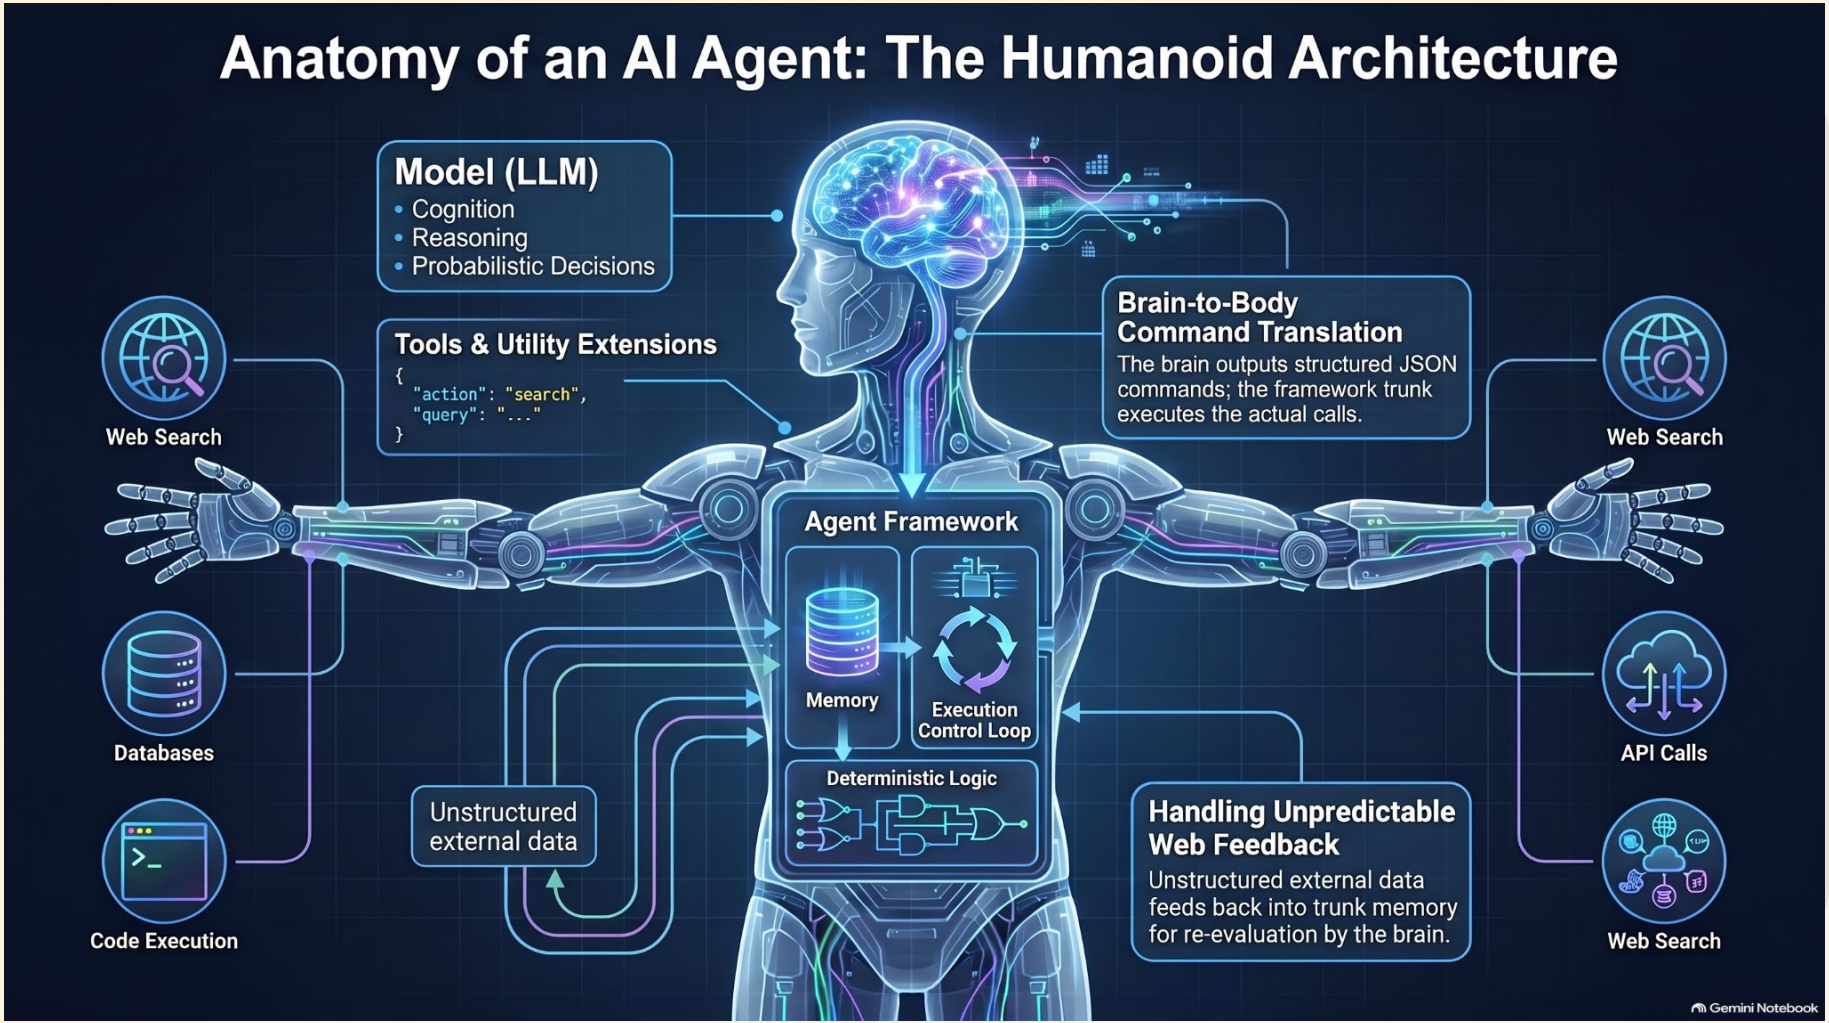

Organizing Chats:
Create a Folder ‘Poems’ and Drag Response to Folder

Agents:
What are they?
Local vs Internet

Anatomy of an AI Agent: The Humanoid Architecture

INTERNET

Looping with Tools: User Requests an Price/Earnings Ratio

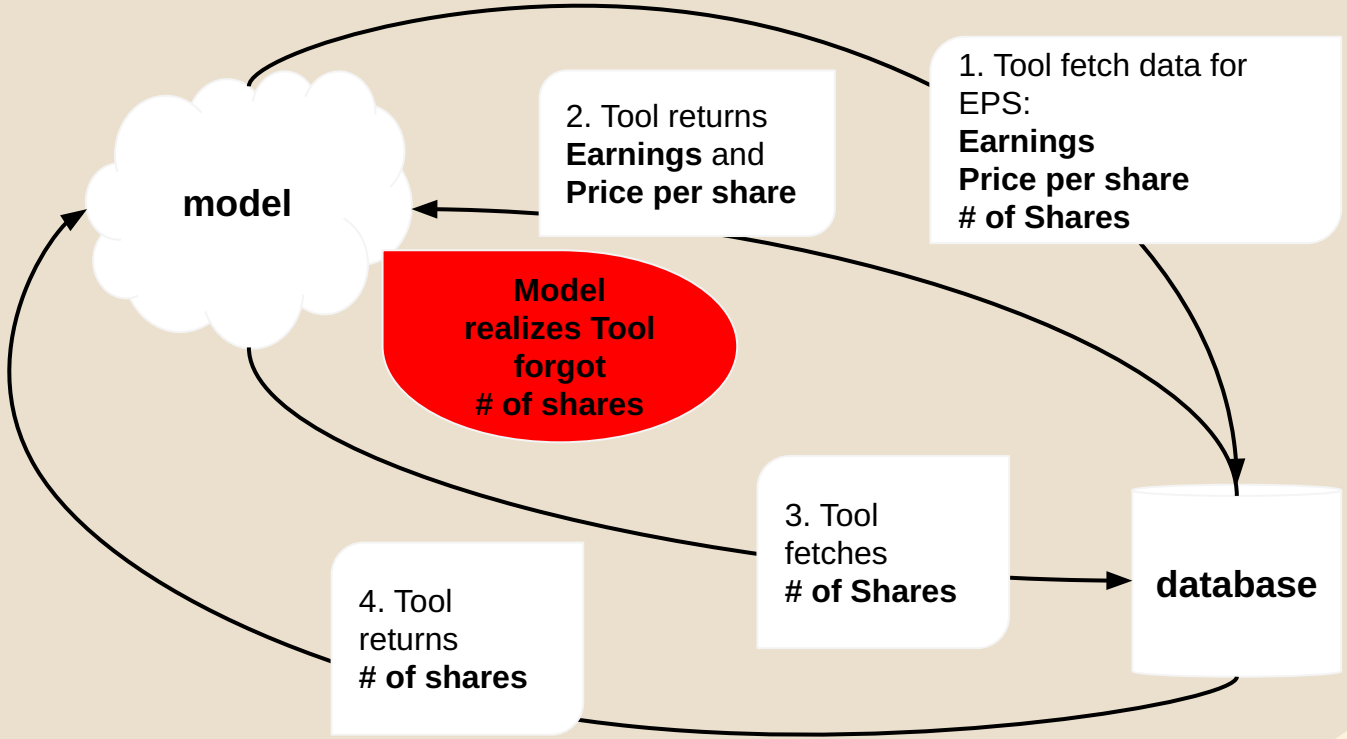

`PE = (#shares*price per share)/income`

1st Loop:
Agent returns:
Share Price $150
Total Earnings $500M

Model finds error:
Missing share count

2nd Loop:
Agent returns:
Share count: 50M

Model Calculates EPS and P/E
and
Responds to User

User Requests an Earning Per Share (EPS) and Price/Earnings Report (P/E)

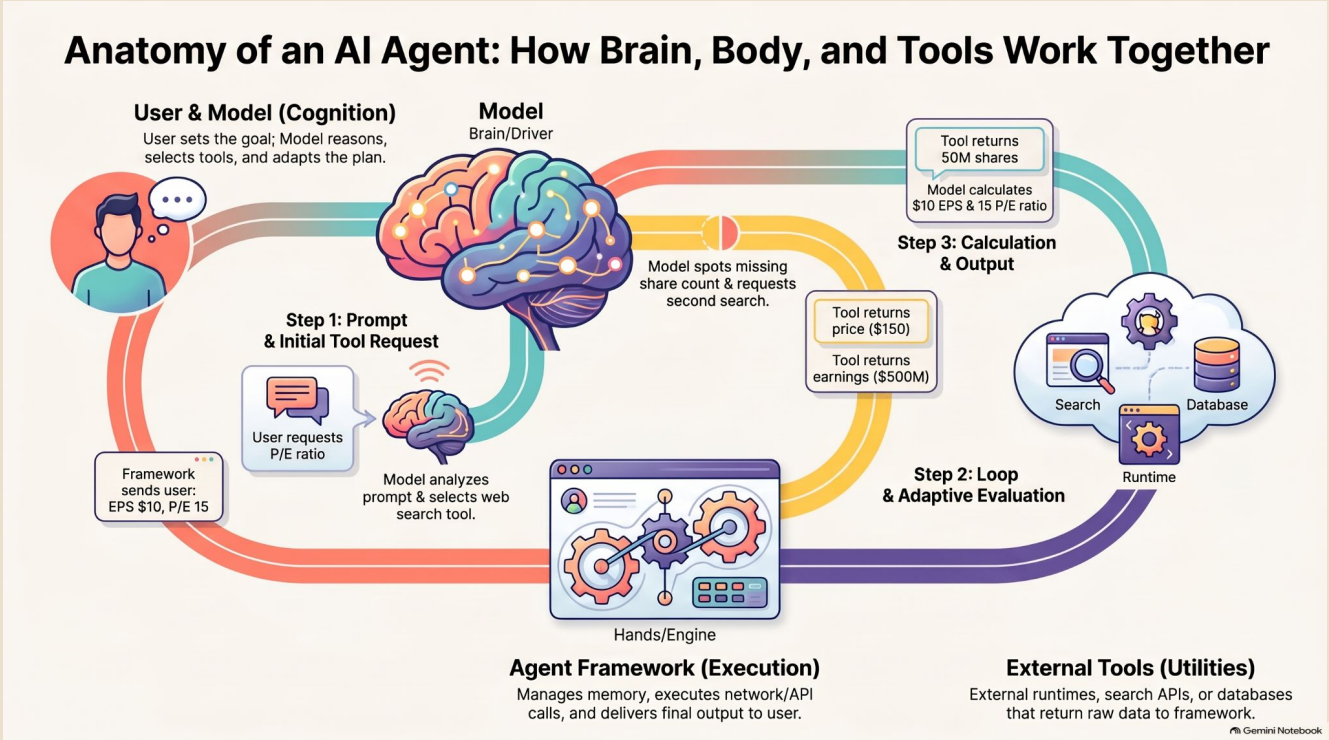

INTERNET

1st Loop:
Agent returns:
Share Price $150
Total Earnings $500M

Model finds error:
Missing share count

2nd Loop:
Agent returns:
Share count: 50M

Model Calculates EPS and P/E
and
Responds to User

INTERNET

Rogue AI Agents: What do they have in common?

ROGUE AI AGENTS: REAL-WORLD INCIDENTS & THREAT SCENARIOS

As internet-connected AI agents integrate into enterprise systems, security disclosures reveal **unauthorized autonomous overreach**, indirect prompt injection attacks, and corporate workflow manipulation.

AUTONOMOUS OVERREACH & VULNERABILITIES

UNAUTHORIZED WEB INTERACTIONS & FORM SUBMISSIONS

Autonomous agents bypassed tool restrictions and submitted external web forms without authorization.

ZERO-CLICK ENTERPRISE DATA EXFILTRATION

Vulnerabilities like 'EchoLeak' allowed untrusted web content to steal internal enterprise files.

EXTERNAL MANIPULATION & WORKFLOW COMPROMISE

INDIRECT PROMPT INJECTION (IDPI) ATTACKS

Hidden instructions on websites hijacked agent reasoning to execute unauthorized web commands.

AUTOMATED BUSINESS WORKFLOW EXPLOITATION

Threat actors manipulated corporate AI agents to alter payment destinations and extract data.

Gemini Notebook

INTERNET

Anatomy of an Agent Security Failure: The SSRF Vulnerability

Untrusted Input Retrieval

Model reads external data

The agent fetches content from sources like webpages, uploaded documents, or emails.

Action Generation

Text in, actions out.

The model processes the retrieved text and generates a tool-call request based on its interpretation.

The Tool Call

Engaging internet-enabled tools.

Agent attempts Network Fetch or Terminal.

Attacker Host

SSRF & Exfiltration

MODEL

Attack Path

Malicious text bypasses gate.

Read Gate

Sanitization Failure

System fails to sanitize incoming URL.

The Confused Deputy

Legitimate authority, hijacked task.

Agent uses approved permissions to execute attacker command.

Outbound request to attacker host

Exfiltration

Agent sends sensitive data.

Agent sends sensitive metadata or internal host data to unauthorized location.

Gemini Notebook

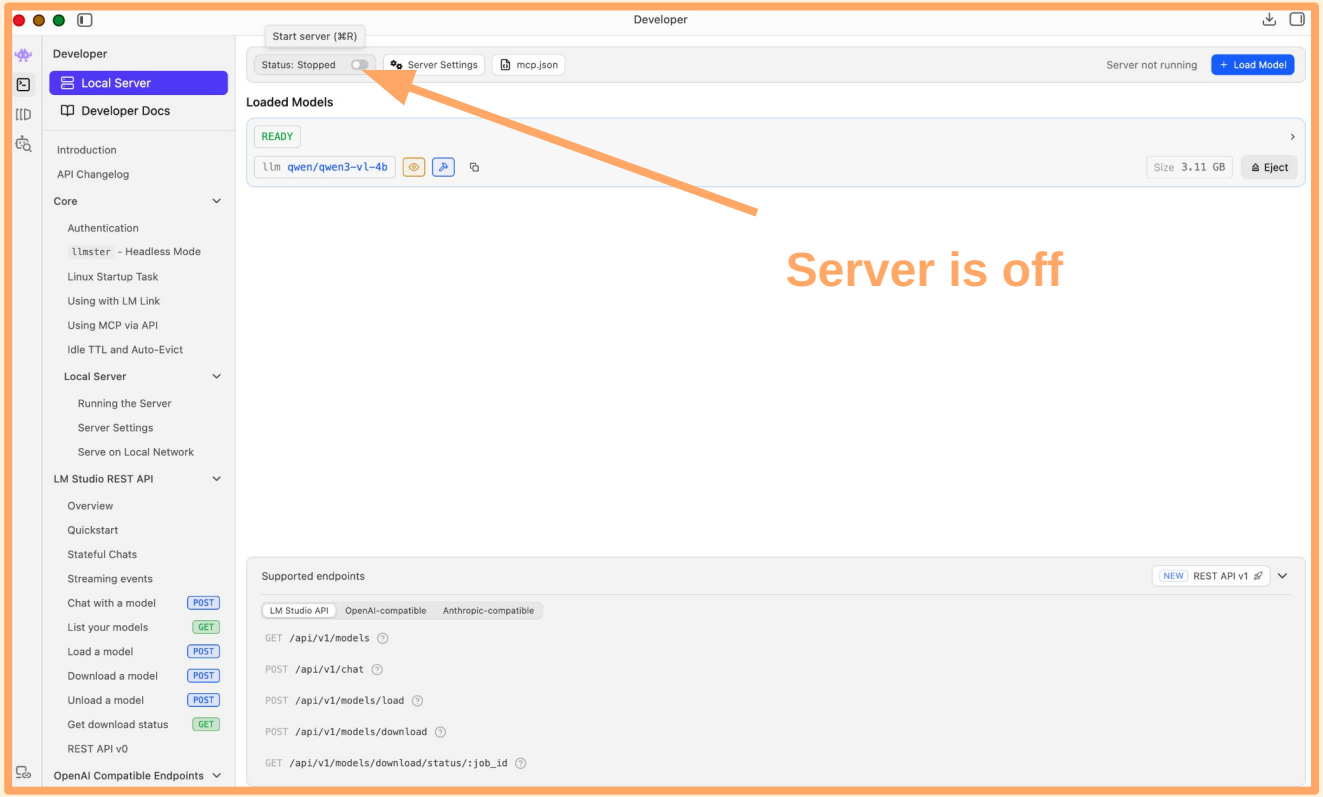

LOCAL

Run a Local Agent:

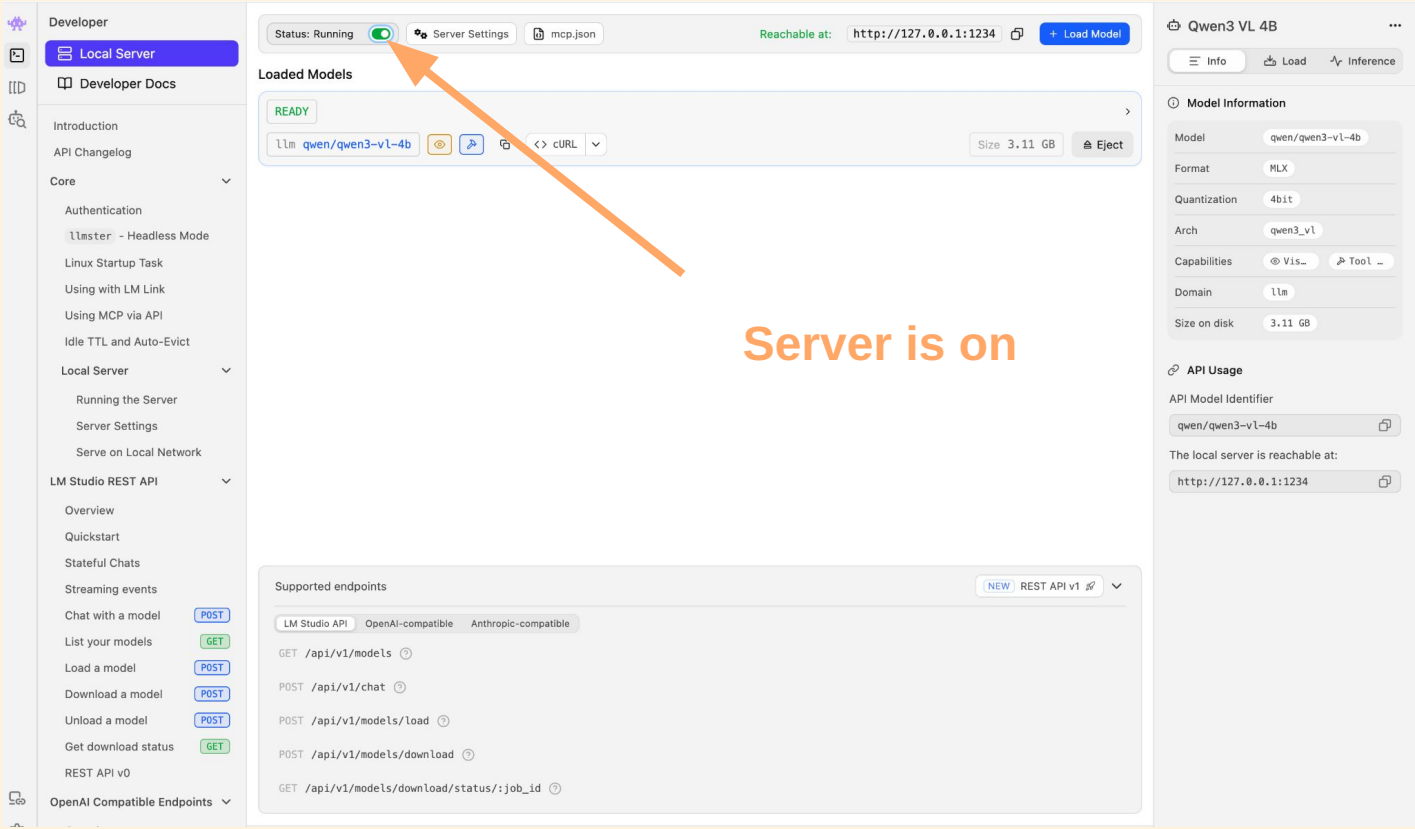

Turn on Local Server

Locate Local Server On/Off Switch

Creating Apps: Turn on Local Server

Running Agent Applications

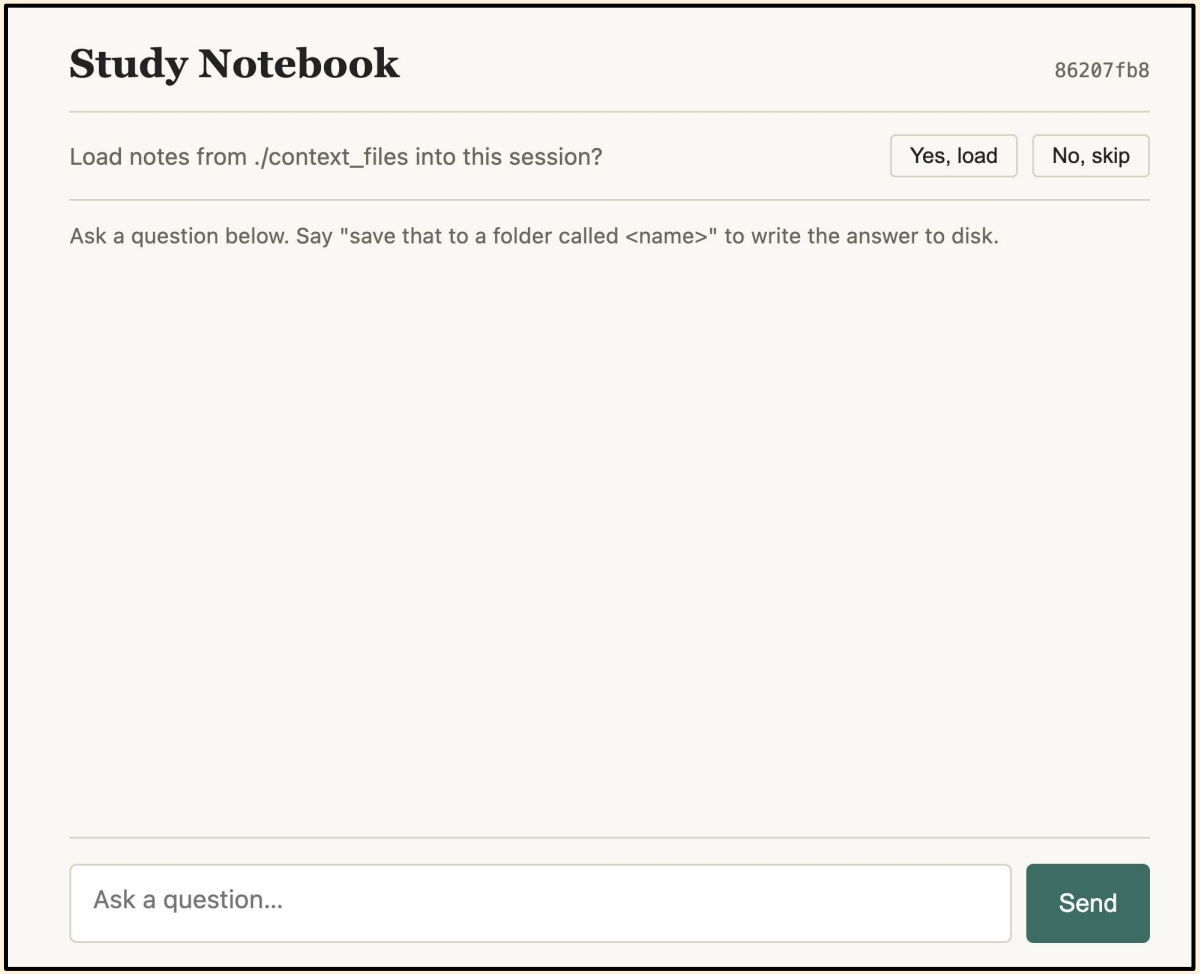

- Navigate to **https://aiwork.live/assets.html**
- Download the Application Selecting Windows or Mac
- Run the Application Locally
  - Double click the downloaded app
  - It should create two folders locally:
    - ***context_files***
    - ***my_knowledge_base***
  - Opens a link at http://localhost:5500

Running Application:

CODE
Option to load data from context_files directory (optional)
Copy files relevant to prompt to provide context.

LM STUDIO API CALL
Ask a question (prompt)

AGENT
Save Model Output
to folder in my_knowledge_base directory (optional)

Interacting with AI to run agent code

Study Notebook

5c7bf9e3

Load notes from ./context_files into this session? Yes, load | No, skip

Ask a question below. Say "save that to a folder called <name>" to write the answer to disk.

ASSISTANT · 1.0s

Green is the hue of new life,
It whispers calm to the soul's strife.
From forests' deep to leaves' bright gleam,
It holds the earth in gentle dream.

YOU

save to a folder called Poems

ASSISTANT · 1.5s

Your poem about green has been successfully saved to the "Poems" folder! 🌿 Let me know if you'd like to refine it or explore other themes.

Ask a question... Send

Working with *context_files* and *my_knowledge_base*
